

Data Intake Report

Name: House Prediction

Report date: 29 July

Internship Batch: LISUM35

Version:<1.0>

Data intake by:Janesh Hasija

Data intake reviewer: Data Glacier

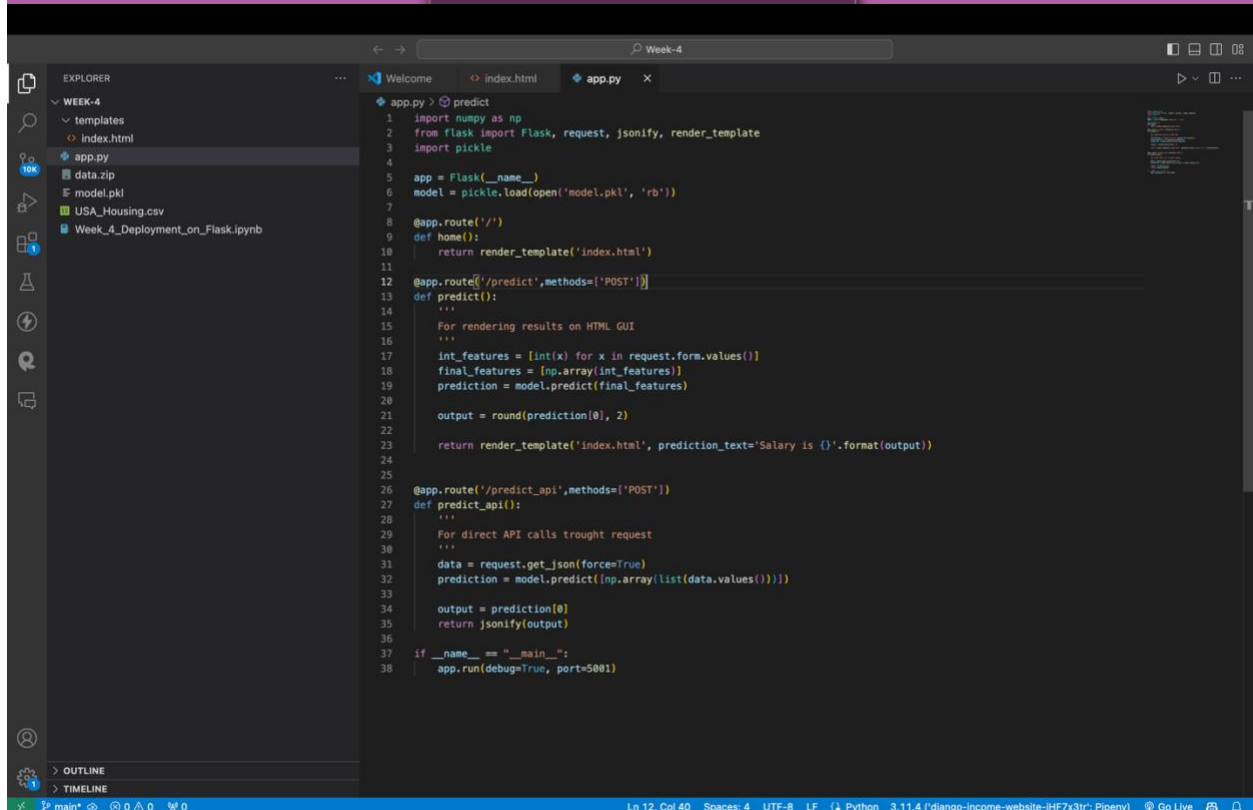

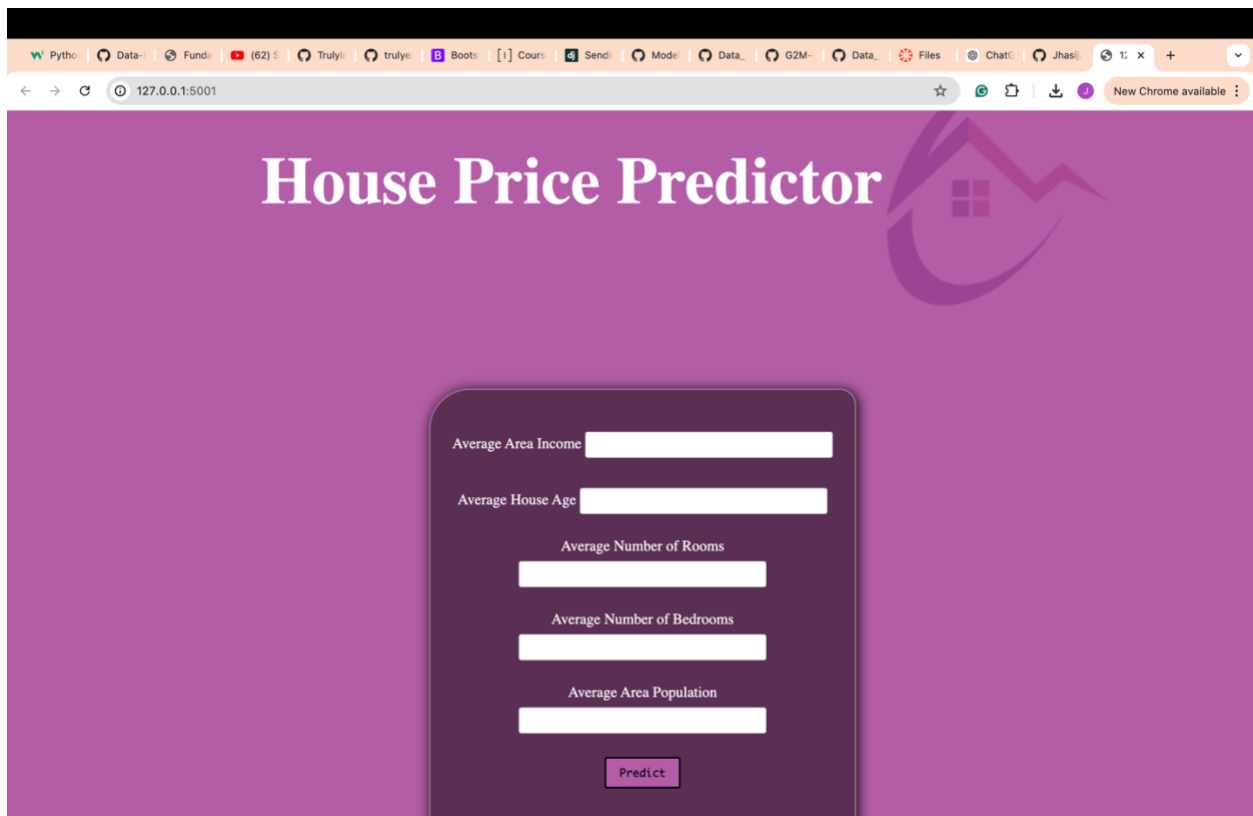

Data storage location: <https://github.com/Jhasija9/Week-4.git>

Tabular data details:

Total number of observations	5000
Total number of files	1
Total number of features	7
Base format of the file	csv
Size of the data	709 KB

Note: Replicate same table with file name if you have more than one file.

Proposed Approach:

```
1 import numpy as np
2 from flask import Flask, request, jsonify, render_template
3 import pickle
4
5 app = Flask(__name__)
6 model = pickle.load(open('model.pkl', 'rb'))
7
8 @app.route('/')
9 def home():
10     return render_template('index.html')
11
12 @app.route('/predict', methods=['POST'])
13 def predict():
14     """
15     For rendering results on HTML GUI
16     """
17     int_features = [int(x) for x in request.form.values()]
18     final_features = [np.array(int_features)]
19     prediction = model.predict(final_features)
20
21     output = round(prediction[0], 2)
22
23     return render_template('index.html', prediction_text='Salary is {}'.format(output))
24
25
26 @app.route('/predict_api', methods=['POST'])
27 def predict_api():
28     """
29     For direct API calls through request
30     """
31     data = request.get_json(force=True)
32     prediction = model.predict([np.array(list(data.values()))])
33
34     output = prediction[0]
35     return jsonify(output)
36
37 if __name__ == '__main__':
38     app.run(debug=True, port=5001)
```
